```
<!DOCTYPE html>
<html>
<head>
<style>
table {
  font-family: arial, sans-serif;
}
td, th {
  border: 1px solid red;
  text-align: left;
}
</style>
</head>
<body>
```

```
<h2>HTML Table</h2>

<table>
  <tr>
    <th>Company</th>
    <th>Contact</th>
    <th>Country</th>
  </tr>
```

```
<style>
table, th, td {
  border: 1px solid black;
}
</style>
</head>
<body>
<h2>Table With Border</h2>
<p>Use the CSS border property to add
a border to the table.</p>
<table style="width:100%">
  <tr>
    <th>Firstname</th>
    <th>Lastname</th>
    <th>Age</th>
  </tr>
```

Table With Border

Use the CSS border property to add a border to the table.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

Collapsed Table Borders

To avoid having double borders like in the example above, set the CSS `border-collapse` property to `collapse`.

This will make the borders collapse into a single border:

```
<style>
table, th, td {
  border: 1px solid black;
  border-collapse: collapse;
}
```

```
</style>
</head>
<body>
<h2>Collapsed Borders</h2>
<p>If you want the borders to collapse into one border, add the CSS border-collapse
property.</p>
<table style="width:100%">
  <tr>
    <th>Firstname</th>
    <th>Lastname</th>
    <th>Age</th>
  </tr>
```

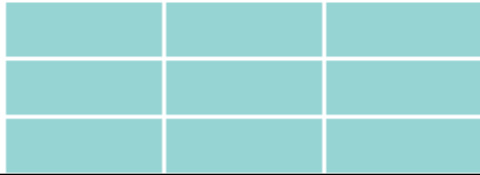

Collapsed Borders

If you want the borders to collapse into one border, add the CSS border-collapse property.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

Style Table Borders

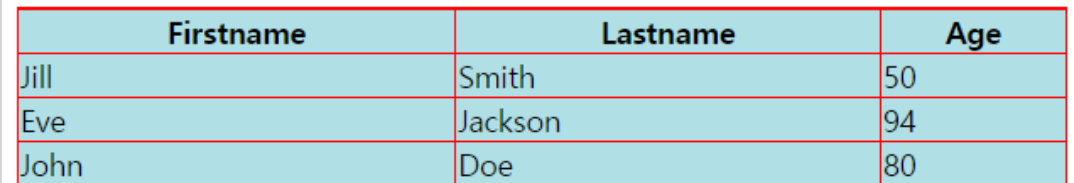

If you set a background color of each cell, and give the border a white color (the same as the document background), you get the impression of an invisible border:

```
<style>
table, th, td {
  border: 1px solid white;
  border-collapse: collapse;
}
th, td {
  background-color: powderblue;
}
</style>
```

```
</head>
<body>
<h2>Table With Invisible Borders</h2>
<p>Style the table with white borders and a background color of the cells to make the
impression of invisible borders.</p>
<table style="width:100%">
  <tr>
    <th>Firstname</th>
    <th>Lastname</th>
    <th>Age</th>
  </tr>
```

```
<style>
table, th, td {
  border: 1px solid red;
  border-collapse: collapse;
}
th, td {
  background-color: powderblue;
}
</style>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

```
<style>
table, th, td {
  border: 1px solid black;
  border-radius: 10px;
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<h2>Table With Rounded Borders</h2>
```

```
<p>Use the CSS border-radius property to add rounded corners to the borders.</p>
```

```
<table style="width:100%">
```

```
  <tr>
```

```
    <th>Firstname</th>
```

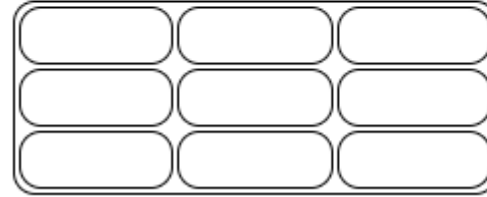

```
    <th>Lastname</th>
```

```
    <th>Age</th>
```

```
  </tr>
```

Round Table Borders

With the `border-radius` property, the borders get rounded corners:

A 3x3 table with rounded borders. The table is enclosed in a black border. The text "Round Table Borders" is at the top. Below it, a paragraph explains that the "border-radius" property gives the borders rounded corners. At the bottom, a 3x3 table is shown with rounded borders, illustrating the effect of the CSS property.

Skip the border around the table by leaving out `table` from the css selector:

```
<style>
th, td {
  border: 1px solid black;
  border-radius: 10px;
}
</style>
```

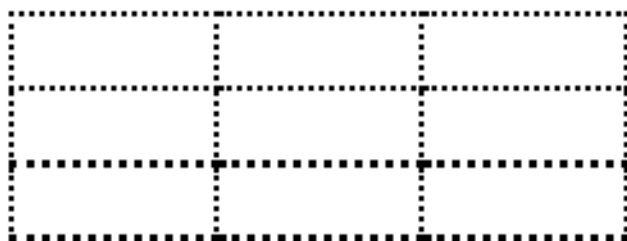

Table With Rounded Borders

Use the CSS `border-radius` property to add rounded corners to the table cells.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

Dotted Table Borders

With the `border-style` property, you can set the appearance of the border.

The following values are allowed:

- `dotted`
- `dashed`
- `solid`
- `double`
- `groove`
- `ridge`
- `inset`
- `outset`
- `none`
- `hidden`

```
<style>
th, td {
  border-style: dotted;
}
</style>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

```
<style>
th, td {
  border-style: double;
}
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

```
<style>
th, td {
  border-style: inset;
}
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

```
<style>
th, td {
  border-style:solid;
  border-color: magenta;
}
</style>
</head>
<body>
<h2>Table With Border Color</h2>
<p>Use the CSS border-color property to set the color of the
borders.</p>
<table style="width:100%">
  <tr>
    <th>Firstname</th>
    <th>Lastname</th>
    <th>Age</th>
  </tr>
```

Table With Border Color

Use the CSS border-color property to set the color of the borders.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

```
<table style="width:100%">
  <tr>
    <th>Firstname</th>
    <td>Jill</td>
    <td>Eve</td>
  </tr>
  <tr>
    <th>Lastname</th>
    <td>Smith</td>
    <td>Jackson</td>
  </tr>
  <tr>
    <th>Age</th>
    <td>50</td>
    <td>94</td>
  </tr>
</table>
```

Vertical Table Headers

The first column becomes table headers if you set the first table cell in each table row to a TH element:

Firstname	Jill	Eve
Lastname	Smith	Jackson
Age	50	94

Try to make the given table.
